

hamsill-rolando-2018-01-02.mp4

[00:00:13] My. My dad was a fisherman. I copy out my oldest brother. My or my generation is. Its. Population is so big and most of us is fishermen.

[00:00:39] CATCH FISH. AND. Each boat was cheaper when I took them out to sea and when I. Know what I really earn in life. That's my university. That's my passion. And that's. All I. I. Give my kids. After my work. Takes. Three.

[00:01:04] Different stuff.

[00:01:11] I would like to. Anyone want to learn. I'm willing to. Give them the OK.

[00:01:22] And. I can do both.

[00:01:23] But my my life in fishing is handline.

[00:01:33] Anything coming up anything. bite my line. Do you have a favorite. To eat to eat to to eat.

[00:01:44] For it. I like Jack fish much at home. People like snappers

[00:02:00] If you know what you're doing. Nothing is hard.

[00:02:04] OK. If you really want to fish you know you're on top of the fish. You can catch anything. You have to know places you have to move our own to don't say one place anyone say there is no fish. We. Move around.

[00:02:22] GPS is new for us but I use it to mark not to,,,it cannot tell you size of fish or type or how many.

[00:03:08] This time we have some more fish here. Well you know what happens. Is we don't have tofish like the Pacific.. We have less fish here. Like nets. Where you're fishing and that is fishing and not enough fishing. Might be catching. But. You catch them in nets. Fish move. Because they are smart. Fish get smarter just other people are smart every day. And imagine getting smarter every day. People do not htink as smart. People and fish. Is smart. We don't think it that way. But they are. They tell you to go home at night.

[00:04:27] As your best friend when you die. Right. They know. When you need they know where you are. Something I've been to. They know. Because you have to give them care. We have to. Make our fishing. Live. This is.

[00:04:45] This. This. Was the new this is.. Sustainable. Yes Because we have to. Make the effort. we use lobster traps

[00:04:58] We use 2x2 so you do not catch the samll fish you ony catch the big so my kids can catch fish too.

[00:05:51] That way less. Right. The only thing is. I try to eliminate traps this like this is my way or I know maybe in six months three months. So it's going to mean. It say by two by two. And when I make my traps I use 2x2. When you use the small mesh they fall apart quicky.

[00:06:11] I catch a bit snapper maybe 65 kilo on a handline. It took maybe 35 minutes. That was a longtime ago but it was a good fish. .

[00:07:25] The. Weather is changing. By the rough edges of the weather is not it. But we always have problem. There is a lot of weather coming from Mexico. In the year or whatever and they didn't affect us a lot. What changes with the weather is that. It's kind of something. You know sometimes we can get on things that I don't. want. This month we have smoot weather but. It Would be changing. And it can suddenly change it. We don't have this warm weather that we used to have before I would say. Used to be March would be smooth but now it is changing and rough weather can come anytime.

[00:08:21] This place where we are living used to be sea. Here this ground used to be ocean.

[00:09:09] Can Live Aboard fishing. But right now of you if I go to the Pacific I think it's more snapper when. I can get more days I can go to Pacific and I can catch many snapper there.

[00:09:19] But here we do not have everything. We don't have like reef fish here.

[00:09:27] Yeah we have problem with lion fish. They just come in but I see many lion fish.

[00:09:41] I don't know. but the problem I see is on a on the banana plantation when the fertilize it hurt the fishing. It hurts the water and is much pollution.

[00:10:11] Fishing. No. lionfish We just come in.

[00:10:42] There is more regulation for us. but no regulation for the plantation. They do not care about the pollution or the fisherman . They just pay the governemnt but here we don't get nothing. We have 4 months where we can catch lobster but that is all we can do..

[00:11:44] Everything changes. Yeah. Everything down. Well. Nearly. Everything going down. Everything. Going on. Right now.

[00:12:07] I would do it I would like to teach them. But I would never. like them to be fisherman Like to Teach the next. Person but not my kids.

[00:12:20] That's the passion from your life. I'm a Professional. So I think I do my work. And that is something that I love.

[00:12:36] Sure. Sure. Good. Why. Because it is is different you know. Nature is different. I saw it in fishing line high line in his desk.

[00:12:46] I'm you guys I don't use or I use but be great. Thank you.

[00:12:58] This Type of fishing with People. Just. Like you. When you. When you teach them. Does it bother you. When you teach them This. Fell the fish if it is sensitive to. the hand. These are without weights. Well this is ffor live bait. .

[00:13:41] This is at 0 and 30 of about 30 pounds or 35 0 or something like that.

[00:13:49] you're sensitive in your hand. Mm hmm. Hold it. Hold it. You feel the fish. You fight the fish and tire him and then bring him to the boat.

[00:14:10] We use the sardines and we cut out the fish belly and we make like a squid for the bait. And we throw it but we throw the larger hooks so I can use this and I can kill a larger fish.
