[00:00:12] Jones Had been in South Africa. For 25 years. It. Has only been farmed. On a commercial scale. Executive coach of the student. The opportunity so. Far of. Farming anything. And Georgia being imported at that stage in the 1970s. Certainly we had a good definition of what the product. It would been imported mainly from Denmark at that stage. So we could replace the imports that technology was fairly well developed. A farm that I could acquire. And. For me it developed from there. And. It was incidentally historically the same time that. We do the Rainbows browns and golden jumps. And specifically the three types. For the angling market so it takes. Three different types to provide. We supply. I would think about 60 to 70 percent .

[00:02:00] They grow at the same rate. We don't produce very many of them we don't produce sufficient. The Browns take a little longer. So they take up some space. As opposed to a wage largely cut government influence. So that the game is. Totally. The government stopped. By providing. Aid. Distribution is. Basically a country of. Job based leisure industry. Centers around. The areas where you have clean water and. Mountain ranges which is also. And in South Africa we as. Citizens associated with. These areas. Flow.

[00:03:38] Down the Western Cape. In case you didn't. Tell. DURBIN And Pietermaritzburg. In. The shouting the northern areas. Of Johannesburg and Pretoria and they are all within. About two to two and a half hour drive. From where the child is situated. So the acting pressure is quite high. Where. The fishing industry is situated contraceptives. Which. Translates into basically puts and takes up efficient. In the Eastern Cape. On the dock back. You have a different situation. Where the fish are. Stopped. As juveniles. Or even eggs. Where they are left alone and local populations get established. And. Then. Ending oppression is no different like the. The other centers.

[00:04:33] Have to do stuff on a regular basis. Well now. I suppose containing 5 percent of what. You say Are rainbows. Living. On a child farm is like playing golf. It's always a beautiful area. The people involved in the industry are. Keen about what they doing. The clients are keen about. What they're doing. It's a nice industry to be in. It's a clean industry. And then. Yeah. I. Like the technology and the fact that. My children grew up on the phone. I had. Never. Seen. It fit. To. Associate their. To. Protect. Their future life on the front.

[00:05:32] It's a shame. Let me make it for just because. We live on a river. That. We live in the area where there's quite a bit of fishing. So then we have. Any friends. Competition. We. Also started years ago. The first annual syndicates in our area. Well. Quite a bit about the equipment. Where 80 per cent of the people are employed in some other. Town based activity would they be arrested on. But it seems the town to because. Of course there are. Efficient facilities. In the area. People come on weekends and reach. Watch developments. Around. Charge. I think. Will be influenced by the country. And it was. Initially imported specifically. Well first of all South Africa is a great country just to visit. Cape. Down is a fantastic city.

[00:07:12] And it could have a national park. That. Is a fantastic place to visit. And. The group. Is very close to the jobs burgers coffee. And the dogs burgers a long range of is running. On the eastern sea. We've judge fishing almost 42 polling. And they are very secluded spots. They are very nice and Mr. Fish. Namely sending quick. Money. A shallow wish that it was. I'm not feeling any big rivers. And also for Europeans and Americans I

think on TV. Technologically speaking. Biology and tech jobs. And the production methodology and. The information that I gathered quite sufficient. To sustain. What we were doing. Because. We've just released.

[00:08:32] And with the advent of the Internet and things like that. Fortunately we have a couple of events that. Specialize. In agriculture. And. I. Think technologically. This is where we can cope. It's quite easy. Easily. But. I think our main challenges. As we're developing countries. It is new. So they have to have time to learn. And to adapt. I would think that our. Current policies. Are probably our biggest challenge. And. I think that we are making a significant headway. In. For. Clearing. The. Bottlenecks. In.

[00:10:04] Regulation and regulating the industry. Hopefully. Funding started in South Africa. The main marketplace for table size. In other words efficient aging and in the. Rates. You do about 20 grand. To an. The age of. Nine months as soon as ten. Fell. About 40 months. The latest. Production goes to. Producing large fish. Dangling market. Now. Thirds of. Fish are 500. Grams the. There are a number of. Aquaculture. Feeds. On.

[00:11:25] A portion of what they do. Which means that. In a big company that produces say don't feed or dictate. That. There is sufficient fishmeal and.

[00:11:46] it is it is one of. The things that they do. But we have a number of competing ones. And we also had access to. Importations of. Especially the juvenile feeds. And we do. Need to make use of that because the quality. Taken by. Maybe this will. Be a good example because we've. Been supplying the liberal. White tablecloth markets. With. And salacious details these arguments. Developments. In developments such. The contract. That. Most South Africans prefer that. To imported salmon. Things like have a lot of players have things like. The diversity is not very big. So Jones company makes. Things are not doing very well. People keep on it but people think they give money. Today. Economic situations. As you would expect in the rest of the. Equity culture is structured that way. You know if you look at the return on investment. In. Agriculture Movement to finish small. Maybe 2 or 3 percent. On. The. Value of the. You can't really build out. Anything significant in one generation. It does take a few.
