 Color: natural Color: natural
 R. Ear Color Marker: violet L. Ear Color Marker: violet
 Neck Marker (Area) Color: pink Tattoo: 014 behind right foreleg. "Ingemar"

Other distinguishing marks: This bear appeared at Trout Creek dump July 7 and established himself as the dominant boar. He appeared most of the evenings that the dump was observed but was absent on several occasions. There is no mistaking this bear- the right ear is slit, and although his head is badly scarred all over, he has a very prominent scar behind his left eye. Also he is one of the largest of the boars observed. Apparently, the evenings he did not visit the Trout Creek dump, he visited the Fishing Bridge camp. an
Remarks: overland trip of approximately 6 to 10 miles. Rump to muzzle measurement - 83". Trapped at Fishing Bridge campground in Park Service culvert trap. Had several deep fresh cuts on right side of head, badly infected.

Shooting Data:

1 3/4" barbed needle used, shot into front of right shoulder.
 207 mg. succostrin, or 1 mg / 3# body wt.
 Started taking noticeable effect in 6 minutes.
 8 min - completely immobilized, breathing quiet, but regular.
 21 min - breathing hard, partial use of jaw muscles (weak), partial use of forelimbs, could flex claws.
 23 min - raised head.
 24 min - held head up and rolled up on stomach, held this position.
 26 min - turned around on stomach, unable to gain feet, breathing easy.
 28 min - gained feet for short time.
 29 min - walked for short distance.
 31 min - walked several steps.
 41 min - able to walk quite a distance before resting. Appears to be recovering nicely.

July 24, 1959 - observed at Trout Creek dump.
 July 25, 1959 - Did not appear at dump while observers were present.
 July 30 - 1959 - Trout Creek, maggots in neck.
 July 31, 1959 - neck much improved, no sign of maggots, dried somewhat.
 Aug. 4, 1959 - neck not bothering. Appears much better.

L. Ear Color Marker: White

Neck Marker (Area) Color: Yellow

Tattoo: _____

Other distinguishing Marks:

Remarks:

Mother of cub (3 cubs) trapped in Park Service culvert trap. Trapp pulled away from dump area. Cubs located and came to trapped sow.

Cub shot with cap-chur gun. First dose 7 mg. shot into side. Took effect in 6 minutes, did not completely immobilize cub, but was unable to stand for more than

few seconds. Sub gained complete muscular coordination in 12 minutes.

Second dose 10 mg. sucostrin given with hand syringe in shoulder. Drug took effect in 2 minutes. Cub gained feet in 8 minutes, running away in 13 minutes, seemingly fully recovered.

Total dosage--17 mg. sucostrin, or 1mg/26 lb. body weight.

This cub remained in the vicinity of its trapped mother. After she was marked and released, the cub discovered her. At first the cub seemed frightened and ran away, but upon scenting its mother returned to her. This was approx. 1 hr. after it had been tagged and released. The cub attempted to suckle for a time and then went to sleep beside its mother. The saw was still under the influence of the drug. The cub remained with its mother until she was able to move off.

Mother of this bear is marked bear no. 7.

First sight record - July 12 at Trout Creek. Have returned every night since.
