Designation or Subject

MEMORANDUM FOR

A. Hornay

Nov 5, 19342

Mrs:

The items we were talking about yesterday are in plot #4, not scarified transect B. They have been counted as caches in October 1942 summaries.

Will you please look at plot 6, not scarified transect B in 1941 ^{litterburn} data again? This cache was counted in June 1941 only, but I think it should have been counted again in October 1941?

I have made corrections for plot 3, scarified transects A and B, eliminating seedlings in chain 8. Should seedlings also be eliminated from plot 3, not scarified transect B, chain 8, to compensate when making comparisons?

We will be glad to make any corrections you wish.

Gilce E. Gae
