Gus,

While cleaning out my files I found the enclosed materials. Because they may still be of value to you, I'm sending them to you for disposition.

Dear Gus,

After long deliberation and much urging from other people, I am actively considering preparation of a bulletin or manual type publication on game range management. I have worked out a suggested list of chapters and am asking knowledgeable men in the field if they could or would care to contribute a chapter. From the list you will see that I am considering you for the chapter on rest rotation grazing in game range management. I have attended a couple of your training sessions in New Mexico and know that you have very interesting material on the subject.

At this time I do not know how the material will be published but I will consider both private and government publication. Much will depend upon the amount and quality of material that I am able to accumulate. The ultimate would be a text book by a private publisher but I realize this is quite ambitious. Because of these uncertainties I cannot promise remuneration for your efforts at this time.

Perhaps, as you look over the chapter list you will think of other subjects that should be discussed and surely other qualified men to write on one or more of the subjects.

If you do not care to embark upon the writing of a chapter, perhaps you can supply material that you have previously written. This would be suitable if you can give me permission to use it. If this whole project strikes you as being worthwhile I will greatly appreciate hearing from you and will be honored to include material that you may wish to furnish.

Thank you for your consideration.

Sincerely,

Sam

Dear Professor Hormay:

The Natural Resources Defense Council (NRDC) is a non-profit environmental organization which seeks, primarily through its legal arm, to insure that government agencies give adequate consideration to ecological factors in planning and administering their activities. Recently, we have begun a study of grazing on public lands administered by the Bureau of Land Management.

We should very much like to meet and talk with you to learn more of your views on the proper management of grazing on the public lands and on constructive efforts NRDC might engage in to ameliorate any problems involved in the grazing program, as it is presently administered.

We will contact you by telephone next week to see if we can arrange a mutually agreeable meeting time. We are looking forward to talking to you.

Sincerely,

Johanna H. Wald
