November 18, 1974

Bruce Hamilton
High Country News
Box K, Lander, Wyoming 82520

Dear Bruce:

I was happy to see your keen interest in the Lander meeting. I hope you will continue to participate in the program. You can contribute in many ways. You represent one of many interests whose input in planning is essential to bringing our wildlands to a more desirable and productive condition.

I failed to suggest that you be included in the group that was set up to determine the location and type of management facilities planned for the Hall Creek area. It was an oversight. I would like to see you in the group and will inform Dale Brubaker, Area Manager, accordingly.

I don't expect to hold another planning session such as the one in Lander until next spring sometime. I will let you know of my schedule in other states as soon as it is jelled.

Enclosed is a copy of a publication of mine on wildland management. (Principles of Rest-Rotation Grazing and Multiple-Use Land Management, by August L. Hormay, USDI, BLM, USDA F.S. Training Text-4 (2200) 1970). Also enclosed is a brief summary of my background.

Best regards,

AUGUST L. HORMAY
Range Conservationist

Biographical Sketch

A. L. Hormay

August L. "Gus" Hormay, the developer of the rest-rotation grazing system, has pursued a public service career in natural resource conservation for more than 40 years.

Mr. Hormay graduated in forestry at the University of California in 1930. He specialized in range management and completed a year of post-graduate studies in biological sciences to further prepare himself for work in this field.

He joined the U.S. Forest Service in 1931 and spent the next 36 years in research on range ecology and management with the Pacific Southwest (formerly California) Forest and Range Experiment Station, Berkeley, California. He is now with the Bureau of Land Management, U.S. Department of the Interior, transferring in 1966.

While with the Forest Service he developed the theory of rest-rotation management. Grazing systems based on this concept are designed to increase or enhance the production not only of livestock but of wildlife, timber, water, and recreation and esthetic values on rangelands. Gus Hormay believes that proper livestock grazing management is man's most important tool for producing and maintaining highest yield of all renewable values on rangelands. Rest-rotation management principles advocated by him have proved effective and practical and are being used at an accelerated rate on rangelands throughout the West.

In 1957 Gus Hormay received a Superior Service Award from the U.S. Department of Agriculture for developing the theory of rest-rotation grazing management. In 1969 he was named Nevada Range Man of the Year by the Nevada Section of the Society for Range Management. In 1971 he was recognized by the U.S. Department of the Interior with the Distinguished Service Award -- the highest honor of the Department. The citation read in part: "Due to his exceptional skills and ability 'Gus' Hormay is eminently successful as a researcher, teacher, advisor, and editor of natural resource publications. . . Most outstanding has been his development of a scientific system of rest-rotation grazing management applicable to most of the western rangelands. . . His rest-rotation principles will have a direct and important bearing on the quality of our environment. . . No other man has currently contributed as much to promoting proper use and management of the total natural rangeland environment, both public and private. . . Mr. Hormay has motivated technicians, stockmen and conservationists alike to utilize expertise in designing management practices." In 1972 he received an Outstanding Achievement and Service Award from the Society for Range Management for "his research accomplishments and for his practical and effective on-the-ground training of land managers in the principles of grazing management. . .and rational uses of the country's natural resources."

Author of several publications on range management and related subjects, Gus Hormay is a member of the Society for Range Management, Society of American Foresters, Ecological Society of America, American Association for Advancement of Science, American Institute of Biological Sciences, California Botanical Society, and National Wildlife Federation.

MEMORANDUM

TO: State Directors

FROM: August L. Hormay, Range Conservationist

SUBJECT: Status of Rest-rotation Multiple-use Land Management
Demonstration Area Program.

Of the 10 states contacted this spring eight are moving ahead with the demonstration area program this fiscal year. Two are not active yet. Utah elected not to participate at this time, and Nevada wished to postpone participation until FY 1976.

Management planning sessions have now been completed in four of the eight active states, in Oregon, Montana, Idaho and Wyoming. Six demonstration areas were covered in these states, one in Oregon, two each in Montana and Idaho, and one in Wyoming. The four other active states--Arizona, California, Colorado and New Mexico have not settled on a demonstration area site yet but plan to do so after January 1, 1975.

A revised schedule of the program is attached. Also attached is a table giving information on the demonstration areas considered to date.

The foundation for a sound multiple-use land management plan was laid in these first planning sessions. The plans were developed sufficiently to permit locating and in some cases, starting construction of principal management facilities such as fences and watering places.

A starting working plan will be written up for each area before the beginning of the coming growing season. The Bureau, together with the Forest Service where national forest lands are involved, will prepare the first draft of the plan. I will set up the form and guide the preparation of the plan.

A copy of the draft will be sent each member of the planning group for input and suggestions. A list of the members of the planning group will accompany the draft so each member is aware of the interests and individuals that are participating in the program.

The group will be brought together at an appropriate time early in the coming growing season to finalize a plan. The plan will be checked out on the ground at that time. This starting plan will be tightened and shaped into even better form in time, in response to results obtained from management.

A procedure for monitoring and evaluating the results of management will also be initiated the first growing season. I will train personnel in the procedure and help apply it initially on each demonstration area.

Examples of rest-rotation multiple-use land management are taking shape rapidly. I am pleased with the progress made in the program to date. It was particularly gratifying to see the various wildland interests get together on the main objectives of management and show desire to see the program through.

Enclosures

A.L.H.

P.S. Please let me know by January 1, 1975 about when you expect to determine the locations of new management facilities - fences, watering places etc. - on the demonstration area. When you have settled on locations send me a small scale map showing your proposals. Also, at that time please let me know when you expect to start construction and where.
