

Bitterbrush

June 21, 1978

Herman

Germination immature excised embryos

Fruits collected on Doyle bitterbrush enclosure site May 30 1978. Stored in Lab 7 41°F box.

June 10 8:30 AM Embryos excised, 15.

Range in maturity

Embryos "1/4" developed
to "juice" in parenchyma cells just
beginning to develop red color -
pink juice stage

June 21 9 AM None grew

" " { In the most mature, red pigment developed
in the cotyledons. Radicle remained
white. Appears that germination
would occur in embryos that were
a few days (5?±) further along in
development
