I lived on Skid Road once. It was only for a short week, and under posh auspices: I was writing a magazine piece about... Hardships weren't many—occupant before me had slept with his muddy boots on. Carol came downtown in the midst of it and took me out for a steak. Try as I might, I couldn't fit—my glasses were correct, my shoes too good, my pants rode wrong, my walk too purposeful (my father's stride). In some ways, I felt surprised at home. The men reminded me of those in Montana saloons—the Mint in Gt Falls, the Stockman in WSS, and Lewistown, and ... the 00 in Livingston, the roadside place in Winston where Alex once ran. Stoked with a few beers, he would glare and declare, When I fight, I begin to cut and shoot. Then the Doig family grin, and cut down the alley and shoot for home.

Skid Road was surprisingly like that, a working society in its way (more)

Yet in one little way, this was also a day I hated to see come and go. It might well be asked how I could both hunger for the Fourth and then turn around and be leery of it. But the case was this, that for all the glory of the holiday, the Gros Ventre creek picnic and then the rodeo and then the dance and on top of that my overnight stay with Ray—at my age then, the day that promised all this also meant to me the mid-point of the season. The bend beyond which my English Creek summer would begin to trickle away. By the calendar this wasn’t anywhere near true. School had been out not much more than a month, and there still lay the remainder of July and all of August and even the front edge of September—which in fact included that 15th birthday I was anticipating,
two months from this very day—before I would be in a classroom again.

Nonetheless the Fourth seemed the turn of the summer. I sensed, almost the way you can feel a change of weather coming, that faster time waited beyond this day.

Life. Maybe fourteen-and-five/sixths years wasn't the highest possible ground to view it from. But I was seeing enough this summer to get at least a beginner's notion of its complications.

HISTORICAL NOTES

Why Are Americans American?

What is there in the U.S. heritage that gives Americans a basic spirit of independence and optimism?

In 1893, youthful (31) Historian Frederick Jackson Turner stirred the American Historical Association with a strikingly original theory. Americans were not simply transplanted Europeans. "The existence of an area of free land," said he, "and the advance of American settlement westward explain American development." The distinctive American character was developed in practical everyday life on the free soil of the frontier. By Turner's reckoning, America's character was set in the historical epoch that ended with the closing of the frontier in the 1880s.

In Chicago last week, before the same scholarly association that Turner excited 66 years ago, Historian C. (for Comer) Vann Woodward of Johns Hopkins University looked beyond free land to another fact of American experience: "Free security." Throughout the nation's history, said Arkansas-born Historian Woodward, the U.S. "has enjoyed a remarkable degree of military security, physical security. This security was not only effective and virtually unchallengeable, but it was free." Two oceans and a protective polar icecap were "nature's gift," enabling the U.S. to maintain security inexpensively.

U.S. geographical good fortune shaped American character, according to Historian Woodward. Just as the frontier bred free men and free institutions, so free security lifted a burden from the nation's back. "Might it not be that the sunnier side of the national disposition—the genuine temperament, the faith in the future, what H. G. Wells once called our 'optimistic fatalism'—is related to centuries of habitation to military security that was virtually free?" asked Woodward. "Free security was certainly related to light taxes and a permissive Government, and they in turn had a lot to do with the famous American living standard." Another boon: "Exemption of American youth from a long training in military discipline that was a routine requirement in other nations."

But free security, like free land, is gone forever, gloomed Woodward. And its passing is important. Respectfully, Woodward suggested that Turner's timetable may be 60-odd years early, that the swift arrival of thermonuclear weapons and intercontinental missiles may have closed "an even longer epoch of American history" than the free-land period. "The American outlook has altered and the prospect darkened," said Woodward. "Only the spell of a long past of security could account for the faltering and bewildered way in which America faced its new peril."

TIME, JANUARY 11, 1960
I have a friend who is a scientist and a woodsman.

(tell Silen's story of living in woods alone, in one of 5 summers spent that way, for so long that he felt he knew the area entirely—and then one day coming through the brush and swordferns to nearly step on what seemed to be a child's toy wheelbarrow. The impact of the unknown, the out-of-place. It turned out to be balloon-borne gadgetry—what at first glimpse seemed a wheelbarrow wheel was a round piece of the equipment—and this set off the vaster apprehension that he had stepped into the middle of a Japanese balloon-bomb. He froze, nothing moving but eyes, until he at last could sort from the scene enough debris to see that it was a US weather-recording balloon.)
