

BIBLIOGRAPHY ON MOTORIZED AND NONMOTORIZED RECREATION IN WILDLIFE HABITAT^{TWS}

Amy Waller
770 Egan Slough Rd., Kalispell, MT 59901

The Montana Chapter of The Wildlife Society (TWS) is developing a comprehensive bibliography on motorized and nonmotorized recreation in wildlife habitat. A volunteer committee (Montana Chapter of TWS Committee on Recreation in Wildlife Habitat) is using the bibliography to prepare a document that identifies issues, impacts, and research needs and provides guidelines for resource managers. To date, the bibliographic database consists of approximately 2600 references compiled from literature searches of commercial and government databases and other recreation bibliographies. Presently, the bibliography includes key references that directly address aspects of recreation and disturbance to wildlife as well as more general papers that contain important biological/ecological species information. The bibliography will be partially annotated and contain the authors' abstracts and/or annotations by committee members. ProCite software is being used to construct the electronic bibliographic database that can be searched by wildlife groups (amphibians and reptiles, birds, carnivores, small mammals, ungulates), types of motorized and nonmotorized recreation, as well as by species, vegetation, soil, water, laws and policy, and other keywords. The final version of the bibliography, including detailed instructions and explanations of keywords, will be available to the public via an internet web site (linked to The Montana State Library, The Wildlife Society, and Montana Fish, Wildlife and Parks) by September 1999. Upon completion, all hard copies of papers accumulated during this project will be held in repository at The Montana State Library for public use. Poster.
