(2) Okanogan River.	83
Water Quality.	85
Water temperatures	87
Erosion and sedimentation.	88
(1) Wenatchee River	89
(2) Okanogan River.	95
Changes in species structure	97
Functional Limitations.	98
Spawning habitat	99
Rearing habitat.	100*
(1) Trophic status and primary production	100*
(2) Zopplankton food supply	112*
(3) Smolt production.	115*
(4) Environmental and competitive interaction	115*
Emergent Summary and Discussion.	127*
Management	147
Goals	147
Conflicts	148
Options	153
Sport fishing allocation	153
Predator control	154
Fertilization - supplimental feeding	157
Habitat preservation	163
Water Quality.	163
Management of mainstem reservoirs.	164
Restoration of extirpated runs	165

memorandum

DATE: 11-29-82

REPLY TO
ATTN OF:Project Leader, FAO, Leavenworth NFH,
Leavenworth, WA 98826

SUBJECT:

Enclosed MS titled, "Determinants of sockeye salmon abundance
in the Columbia River," by J.W. Mullan and Roy Wahle.

TO:

Your critical comments regarding the subject heading would be most appreciated. If at all possible we would appreciate your comments within six weeks. We realize this may represent a considerable imposition on our part, particularly considering the lengthy nature of the MS. Nevertheless, we hope you will bear with us and provide comment in your area of expertise or interest. Abstract, photos, acknowledgements and, in some mailings, citations are not included. We hope this does not cause undue inconvenience.

Thanking you in advance,

James W. Mullan
James W. Mullan
Project Leader
